SUMMARY

Senior Backend Engineer and Engineer Squad Lead with 7+ years of experience building backend systems across fintech, payments, and education technology. Experienced in TypeScript, NestJS, Node.js, Go, Vue, PostgreSQL, MongoDB, Redis, and event-driven microservices. Proven impact in reducing infrastructure latency by 70%, lowering payment processing costs by 30%, leading bank integrations, and coordinating engineering squads for reliable delivery.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Vue, Go, Java, PHP

Frameworks: Node.js, Express.js, NestJS, Laravel, Vue.js

Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch

Tools & Infrastructure: Git, Docker, AWS, GCP, RabbitMQ, NSQ, GCP Pub/Sub

EXPERIENCE

Engineer Squad Lead

Feb. 2025 – Jul 2026

LittleLives

Singapore (Remote)

- Led technical design and delivery of both backend and frontend features across NestJS, Vue, PostgreSQL, and MongoDB services, balancing business requirements with maintainable architecture.
- Reviewed system design, API contracts, and implementation approaches to improve reliability, scalability, and delivery quality.
- Coordinated planning, estimation, prioritization, and sprint readiness with the Product Manager to support on-time delivery.
- Unblocked engineers through technical guidance, decision-making support, and clearer ownership while encouraging team autonomy.

Senior Software Engineer

Apr. 2024 – Feb. 2025

LittleLives

Singapore (Remote)

- Built and maintained backend microservices for Singapore and global market products using TypeScript, NestJS, Vue, PostgreSQL, and MongoDB.
- Implemented backend logging and diagnostic improvements to strengthen monitoring, debugging, and operational visibility.
- Integrated and supported Singapore-specific third-party services including Singpass and ECDA.
- Improved backend maintainability by simplifying branching logic and documenting key systems for team knowledge sharing.
- Contributed to frontend tasks using Vue when needed to support end-to-end delivery.

Senior Software Engineer

Dec. 2022 – Jan. 2024

Xendit

Jakarta (Remote)

- Led the successful migration of regional infrastructure, resulting in a remarkable 70% reduction in latency and significantly improved system performance.
- Implemented multiple bank direct integrations, leading to a notable 30% cost reduction in payment processing.
- Developed and implemented an automatic reconciliation system, reducing manual toil and streamlining the reconciliation process.
- Built and maintained micro-services for disbursement and reconciliation using NodeJS and TypeScript, ensuring seamless and reliable operations.
- Mentored and guided junior engineers, fostering their professional growth and development within the organization.
- Established and maintained effective communication channels with bank partners, facilitating seamless collaboration and timely issue resolution.
- Proactively resolved customer problems related to disbursement, ensuring high customer satisfaction and retention.
- Improved documentation processes by creating clear and comprehensive documentation for easy reference and knowledge sharing.
- Refactored legacy services to improve code quality and maintainability.
- Addressed vulnerability issues, ensuring the security and integrity of the system.

Software Engineer (Mid Level)

Oct. 2021 – Dec. 2022

Xendit

Jakarta (Remote)

- Maintained and optimized micro-services for disbursement and reconciliation, utilizing Nodejs and TypeScript, resulting in improved system performance and reliability.
- Established and maintained effective communication channels with bank partners, ensuring smooth collaboration and timely issue resolution.
- Proactively addressed customer problems related to disbursement, providing prompt and satisfactory solutions, resulting in increased customer satisfaction and retention.
- Enhanced the alert system for breaking-flow and unexpected pending disbursements, minimizing potential disruptions and ensuring timely processing.
- Demonstrated a proactive approach to problem-solving and continuous improvement, actively seeking opportunities to enhance system functionality and user experience.
- Refactored legacy services to improve code quality and maintainability.

Junior Backend Engineer

2019 – 2021

Tunaiku - Amar Bank

Jakarta

- Contributed to backend services using Go, GCP Pub/Sub, Redis, PostgreSQL, MongoDB, Elasticsearch, and BigQuery.
- Participated in code reviews, debugging, testing, and cross-functional delivery for lending-related backend systems.

PROJECTS

School Management System | *TypeScript, NestJS, PostgreSQL, MongoDB*

- Developed and maintained a scalable school management system tailored for Southeast Asian institutions.

Bank Direct Integration | *Node.js, TypeScript*

- Maintained direct bank integrations for Indonesia and the Philippines to support regional payment operations.

Maintaining micro-services for disbursement and reconciliation | *TypeScript, PostgreSQL, MongoDB, Redis*

- Maintained and enhanced microservices handling disbursement and reconciliation to ensure reliable disbursement.
- Ensured the reusability of services across multiple regions.

Validator v10 Wrapper Library | *Go*

- Built a reusable Go library to simplify and standardize data validation logic using the Validator v10 package.

Customer Loyalty Point Systems | *Go, PostgreSQL*

- Developed backend services to manage, track, and redeem customer loyalty points.

Automatic Referral Engagement Systems | *Go, PostgreSQL*

- Designed and implemented an automated workflow that sends targeted emails to boost user engagement and retention.

Affiliate Incentive Calculation Systems | *Go, PostgreSQL*

- Engineered a backend service to calculate incentives for affiliate partners based on dynamic performance metrics and business rules.

Data Extraction from Perfios and ID Card | *Go, Google Cloud Vision*

- Created an extraction service integrating Google Cloud Vision to parse financial and ID documents, streamlining user onboarding and verification.

Affiliate Management Systems | *Go, PostgreSQL, Redis*

- Built a system to onboard, track, and manage affiliate partners, including reporting features for performance monitoring.

Medium for Validator V10 | *bit.ly/go-validator-10*

- Authored a technical blog post demonstrating usage patterns and implementation details of the Validator v10 wrapper library.

EDUCATION

Bina Nusantara University

Bachelor of Computer Science

GPA : 3.74/4.00

Jakarta, Indonesia

2015 – 2019
